Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on January 28th, 2003 has been entered.

Allowable Subject Matter

2. Claims 1-20, 33-47 are allowed.
3. The following is an examiner's statement of reasons for allowance:
 - a. Applicants teach a method for controlling access to copy controlled content to a host device. Applicants' inventive concept is novel and innovative in the sense that it determines whether a host device with access module is on the revocation list and causing the associate module to deny copy controlled content to the host device. The closest prior art, Traw et al (U.S. Patent 5,949,877) teaches an inventive concept wherein a certificate revocation list version number is exchanged between the content source and the content sink, and if the received certificate revocation list version number is newer than the certificate revocation list version number stored in the receiving device, then the certificate revocation list of the receiving device is updated. However, Traw et al fail to teach an inventive concept of determines whether a host device with access module is on

the revocation list and causing the associate module to deny copy controlled content to the host device.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

2. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

b. *Kocher (U.S. Patent No. 6,442,689) teaches an inventive concept that provides a certificate revocation system whose operation is open to public scrutiny to ensure that certificates are not maliciously revoked and that revoked certificates are not marked as valid..*

c. *EPSTEIN, M A (WO 200111819A) teach a method that has a local revocation list containing several revoked identifiers and an access device controlling access to content material based on a comparison of an access identifier to the several revoked identifiers. A receiver receives a new revoked identifier and a relacer randomly replaces a revoked identifier with a new one.*

Art Unit: 3621

d. Business Wire (NPL) teach an inventive concept to use a certificate revocation list in order to provide real time security enforcement and prevent unauthorized access and CRL checks to deny access to users with revoked or suspended certificates
